

TKP-TW

HDPE pipe system for the pressure
conduction of treated water.

¡BIENVENIDO!

TKP-TW

Magent high density polyethylene pipe line specialized for pressure conduction of treated waters certified by CONAGUA according to the Hydraulic Plan for reuse waters.

APPLICATIONS:

- Sewage water
- Reuse waters
- Industrial waters
- Industrial drains
- Sanitary drains

Our HDPE resins contain additives and integrated stabilizers that allow them to be extruded without carbon black preventives, this allows the pipes to be manufactured in natural color or any color without suffering any damage during exposure to the weather, hydrostatic conduction, abrasion and temperature, making it superior to the traditional pipes existing in the market.

TKP-TW THREE-LAYER

THE MAGENTA PE 100 RC COLOR WITH HIGH RESISTANCE TO VOLTAGE AND TO PROLIFERATION OF CRACKS.

LAYER PE100-4710.

COMPOSITE POLYMER NATURAL COLOR PE100-4710.

TKP-TW BILAYER

THE MAGENTA PE 100 RC COLOR WITH HIGH RESISTANCE TO VOLTAGE AND TO PROLIFERATION OF CRACKS.

COMPOSITE POLYMER NATURAL COLOR PE100-4710.

MANUFACTURING FROM 4 "TO 48" OF DIAMETER, FROM RD 7 TO 21

All our pipes comply with national and international standards and certifications and are manufactured in the required color in accordance with the needs of each agency at national level.
